

## NATIONAL PUBLICATIONS FOR THE YOUNG ECONOMISTS

Sorin-Ciprian Teiușan<sup>1</sup>  
Ioana Călean<sup>2</sup>

*ABSTRACT: The publishing of a specialised paper, no matter the category and dimensions, represents a real challenge on the research way, moreover as the target is not only the receiving of the accept for publication, but also the use of the conclusions for the fundament of the future investigations. The results of the research which constitute the object of the publications are interdependent of the preoccupations and the interest domains of research, and solidary with the age and experience obtained by this way. Thus, every reseacher in the economical domain, and especially the young economists, have to proceed to the identification at the regional, national and even international journals which publish economical research for the accomplishment of the proposed conclusions. The organised, structured, presentation, on recognised and ordered aphabetically categories of the scientific journals from the economical domain, will mean a support given to the economists interested in the dissemination of the obtained results in the realised research. In this way, it will be possible an easier identification of the destination which correspond to the articles and papers realised by the researchers from the economical area.*

*Key words: CNCSIS/CNCS; economics; research; researchers; results; scientific journals.*

*JEL Codes: A10, A30*

### Introduction and Objectives

At the general level, by research we understand the action of examining carefully, of studying, consulting and searching by an assembly of methods, proceses and studying techniques, which has a major aim: the obtaining of a result based on information and deep research. The accomplishing of the research requires the appealing to subjects of an obvious interest of the deciders directly connected to the social-economical life, who will use yieldly practically the judgements and the conclusions formulated after the scientific studies.

In the paper “Evaluation of Scientific Research”, the Ad Astra Association (2005) uses the terms “scientific research” or “fundamental scientific research” or “research” in order to “describe a society’s organized cognitive activity resulting in discoveries of more appropriate representations of reality, disseminated in the context of society. This includes any activity in any field where observations and experiments are reported and interpreted, where predictive models are developed, including all of mathematics, physics, chemistry, biology, theoretical and experimental aspects, observations from medical sciences, earth sciences, engineering sciences, agricultural sciences, economics, pshychology and sociology”.

For Corlan (2005), scientific research is “the art of escape from many small problems to a general problem, followed by the involvement of the rest of society in this escape”, and “research meets the adaptation need of society, the research system being the perceptive branch of the adapting mechanism”.

Thus, “scientific research appears as a kind of interface between theory and practice. It is based on a good theory, from which it draws, borrows and uses concepts, rules, procedures or tools

---

<sup>1</sup> “1 Decembrie 1918” University of Alba Iulia, Faculty of Science, Romania, e-mail: [ciprian.teiusan@uab.ro](mailto:ciprian.teiusan@uab.ro)

<sup>2</sup> “1 Decembrie 1918” University of Alba Iulia, Faculty of Science, Romania, e-mail: [ioana\\_c20@yahoo.com](mailto:ioana_c20@yahoo.com)

to know reality better, to seek and find solutions, answers or explanations to theoretical or practical problems. The results of the research are useful for improving, building or rebuilding theories, for enriching the knowledge of the field or of reality in general. The theory is support and beneficiary of scientific research. On the other hand, practice is beneficiary of the research's results, but also of a supplier of many of the problems that is called to resolve. It is the most important real reference, perhaps the only one, if we admit the idea that theory, as a whole, has emerged as a result of the need to solve actual problems and then to generalize". (Zaiț and Spalanzani, 2006)

Scientific activity requires knowing the basic elements for conceiving, preparing and writing a scientific paper, but also multiplying the gathered knowledge regarding the research methodology with the help of the acquired information related to instruments, methods and investigation techniques that ensure the development of a solid research ground for everybody who activates in the knowledge field. Being concern with aspects of the correct development of a scientific paper, Chelcea (2003) created a guide for writing papers in social and human sciences, addressed to "those who are not allowed to deviate from the correct writing of their work: students, PhD candidates, young researchers in general and social and human sciences researchers in particular".

"The main research goal is to acquire scientific knowledge, with incommensurable benefits for culture and human civilization. It's important to store this knowledge within an institutionalized scientific literature in order to retrieve and efficiently use the various knowledge gained over time" (Vințan, 2006). Regardless of the form it takes, the scientific product should be launched on the market where the demand and supply of research information are faced with each other in order to achieve the goal for which it was created, to meet the needs of various users due to its properties and functions. The users acquire this product to use it in this form or acquire it as a raw material or a semi-finished product for the conceptual or applied operative cycle of the research in order to manufacture own achievements.

By this paper, we propose ourselves to give to the young economists, but not only, a list of the Romanian scientific journals from the economical area recognised by the National Council for Scientific Research in Higher Education - NCSRHE (in Romanian: Consiliul Național al Cercetării Științifice din Învățământul Superior - CNCSIS), encouraging, thus, the preoccupations for the scientific research, indispensable to the solutioning of the present economical problems and of the anticipation of the future difficulties.

### **Research Methodology**

The motivation of approaching this theme lays in the fact that the society needs permanently to find new solutions, which used at the right time to fight against the present negative phenomenons, but to avoid the manifestation of other obstacles in the process of the economical human development. Thus, the optimal strategies which fosters the development of the society will be those able to research in detail the past to diminish the gravity of the present phenomenons and to prepare solutions to counteraction of the risks and the uncertainties of the future. To answer to these "key" objectives through obtained results, it is important to have as reporting system the fact that "The Research Method, as Rene Descartes remarked, has four rules. The first one, ... not to consider one thing as being true until we really know it is true ..., the second one, to share each difficulty we may examine in so many parts as we could and as much as we need to solve them better. The third one, to lead our thoughts in an order, starting with the simplest and easiest to know objectives to raise, little by little .... and the last one, to make completed enumerations and general reviews, so that the researcher is sure he did not omit anything to lead his reason and for the scientific truth".

### **Literature Review**

Science is an organized set of knowledge from a certain knowledge field, "a generator of knowledge acquired through the work of scientists that adds every single time new discoveries and

reviews of old knowledge to the common groundwork of knowledge, achieving a permanent development of science.” (Vlada, 2009)

In this sense, “research is the most advanced and rigorous form of knowledge. We can accept that intuition, experience, testing, as well as error and reasoning are actual ways of knowledge, which are foregoing and more used than scientific research in the sense in which it can be considered. These forms have a rather unsystematic and random use, leading to results that can be generalized and exploited by theory only through additional effort. For example, intuition can have great practical value, in scientific research it becomes an ultimate factor for many discoveries” (Zaiț and Spalanzani, 2006). Tributary to these assertions, Kant said: “Thoughts without content are empty, intuitions without content are blind ... knowledge can spring only from their union”.

“Scientific literature is composed essentially of books (especially treaties and monographs), articles published in journals, research reports, proceedings of scientific conferences, doctoral theses, invention patents, research grants (associated scientific reports), etc.” (Vințan, 2006). This is “the storage manner of the results of scientific research in order to find, use and efficiently process knowledge over time. Today, this scientific literature is stored in print, on-line, in digital libraries, in magnetic or optic storage devices”. (Vlada, 2009)

In terms of ranking Romanian scientific literature, there are concerns that aim to develop and implement a national system of indexing publications. Therefore, the National Council for Scientific Research in Higher Education (CNCSIS), an advisory body of the Ministry of Education, Research, Youth and Sports, with the mission to increase the relevance of scientific research in Romanian universities, of the visibility of Romanian science in national and international context, developed a ranking project for scientific journals in Romania. Starting with May 2011, the evaluation of journals is coordinated by the National Council for Scientific Research - NCSR (in Romanian: Consiliul Național al Cercetării Științifice - CNCS), an advisory body of national level founded after the reorganization of the National Council for Scientific Research in Higher Education, whose assignment is to stimulate excellence in Romanian research and to assist the Ministry of Education, Research, Youth and Sports (MECTS), as well as the National Authority for Scientific Research (ANCS), in coordinating, funding, monitoring and assessing the research work in Romania. (<http://www.cncsis.ro/>)

### **Analyses and Results**

The Romanian scientific journals were grouped by the CNCSIS on more categories. The process of evaluation and classifying started 6 years ago and knew a continuous dynamics. At present, there are 5 categories of journals organized on 2 groups, as it follows:

1. Recognised journals CNCSIS, beginning with 2008, as it follows: Category “A” - journals quoted ISI (journals included in Science Citation Index Expanded (SCI-EXPANDED), Social Sciences Citation Index (SSCI) or Arts and Humanities Citation Index (AHCI)), Category “B+” - journals indexed BDI (international data base) and Category “B” - journals with a recognising score.

2. Journals without a recognising score: Category “C” - journals with a potential in recognition and Category “D” - journals in the evidence of CNCSIS.

The framing in one of these categories of a scientific review, it was accomplished after the evaluation of the conditions accomplished by this, demonstrated by the journal’s paper and of the other elements from the file submitted at the CNCSIS according to the requirements told by the evaluation organism, of the criteria and of the provisions of the points and of other minimal elements exposed on-line on the official page of the institution. To be noticed that between 2011-2013, a new methodology of evaluation and classification of the Romanian scientific review. According to the article: “The evaluation of the journals 2011”, for the journals included in the categories “B” and “B+” during the period 2008-2010, CNCSIS maintains their category in 2011, too, till 28.02.2011, completed and sent on the email address of the established person contact,

Compartment expert "The Policy of Science and Scientometry", the sheet of the journal, and they respected all the requirements concerning the web page of the journal in that sheet. Following the fill up of web pages with information required in the evaluation form in 2011, the reassessment was possible until April 15, 2011, which is the e-mail date of this request, mentioning also the CNCSIS code of the journal. (<http://www.cnscis.ro/Public/cat/434/Evaluare-reviste.html>)

Starting with May 2011, the National Council for Scientific Research (CNCS), the new body responsible for accreditation and ranking of national scientific journals has developed at the beginning of its activity a document entitled "For a new vision of the Romanian research" where, based on expert analyses, it explains with the help of two general findings "where we are" in terms of research and "where we want to be" with the help of the proposed solutions. Noticing a weak presence of Romanian academic journals in the international circuit, CNCS is forced to rethink how this type of publications are acknowledged and ranked, aiming to develop a data base for academic journals that will reflect the quality of our regular publications and will encourage natural competition. This data base will be developed "on the basis of the evaluation systems used in EU countries and by the European Science Foundation, through an open and continuous dialog with the scientific environment." (<http://www.cnscs-uefiscdi.ro/wp-content/uploads/2011/04/Evaluarea-revistelor-din-domeniul-umanist.pdf>)

The evaluation and ranking procedure takes into account the continuous submitting of evaluation files, the registration to the web portal <http://www.scipio.ro> and two assessments per year of the files. CNCS announced on April 13 2011, through a material subjected to public debate, the acknowledgement conditions for Romanian academic journals in human sciences, specifying the following ranking categories:

1. Category "A" journals - reference journals for the field, with great international visibility;
2. Category "B" journals - journals for the Romanian academic environment, as well as for foreign researchers, with better visibility at national level;
3. Category "C" journals - journals mainly for researchers in Romania, who work in research fields with local or regional particularities.

After receiving a large number of comments and suggestions, the National Council for Scientific Research has decided to extend the period reserved for public debate within the evaluation program of Romanian journals and publishers until May 11 2011, a date when CNCS organized a public debate about the evaluation and ranking program for Romanian journals and publishers, to which were invited representatives of academic journals and publishing houses. The information package resulted after the public debate and the new calendar of evaluations will be announced in the coming period. (<http://www.cnscs-uefiscdi.ro/>)

For the identification of the Romanian scientific journals, we proceeded to the research of the lists which include the known journals CNCSIS, posted to the address <http://www.cnscis.ro/articole/1991/Situatia-curenta-a-revistelor-recunoscute-CNCSIS-2011.html> and the selecting of those from the Economical Sciences. But what does this domain include? According to the classification of the areas and of the specializations/programmes of the university studies for the license, approved by the Government in 2009 (The Decisions no. 943 and 1093), the fundamental domain: Economical Sciences include 8 domains of the university studies, to which correspond 24 specializations for the license studies, presented in the following table.

Table no. 1

**The component of the fundamental domain Economical Sciences**

<b>The domain of the university studies</b>	<b>The Specializing of the license studies</b>
Economics	Economics and Economic Communication in Business Environment Economics Food Economics Food Economics and Environment General Economics General Economics and Economical Economy
Finance	Finance and Banks
Business Administration	Business Administration Merceology and The Management of the Quality The Administration of Business in Trade, Tourism, Services, Commodities and The Management Quality The Business Administration in the Hosting Services The Economy of the Firm The Trade, Tourism and Services Economics The Trade, Tourism, Services, Management Quality Economy
Accounting	Accounting and Management Information Systems

Economics and International Business	Economics and International Business International Business International Economics
Management	Management Management of the Sustainable Rural Development
Marketing	Marketing

Source: H.G. 943/2009, modified and completed by the H.G. 1093/2009, Anexa 1.

The enunciation of the specializations of license, at the university level, is meant to highlight the searching elements for the identification of the magazines whose objectives subscribe to this searching. Methodologically, at each identified journal we proceeded to checking the internet address posted to assure its functioning, by the connection with the official website of the journal, the titles of the journals and its locations on the internet were planned by grouping these on categories according to the recognizing of CNCSIS and ordered, alphabetically, at each category. We mentioned both situations where the title of the journal is in Romanian language or in other languages.

As we can notice, in table 2 there are 55 journals from the economical sciences recognized by CNCSIS which we identified, from which 3 included in category "A", 49 included in category "B+", and 3 included in category "B". For "A", we accomplished the selection of the journal after the subdomain ISI Economics, presented journals by CNCSIS on the list. For the categories "B+" and "B", the identification of the which answered to the objectives of the research, was made by researching the aim of each journal, of the themes and sections, and their reporting to the component of the fundamental domain Economical Sciences, from above.

On the other hand, for the dissemination of the results of the accomplished research, besides the recognised journals, there must be taken into account the Romanian scientific journals which are not recognised by the CNCISIS. The identification of these in the lists posted by CNCISIS in 2010 was followed by the searching of the official web page by Google Romania (<http://www.google.ro/>), using as the expression of searching the title of the journal. In the case of the journals which have no official page, but give an email address to those interested in publishing, we indicated the web email address.

At the numbers level, the framing in categories of the scientific review from the CNCSIS evidence, product of our process, is reflected in a graphics situation in the following figure.

**Figure no. 1 - The number situation of the journals in the evidence of CNCSIS - Economics**

### Conclusions

Any scientific research in the economics leads inevitably to some final results, which confirm or refutes the hypothesis formulated by the researcher. “By the research results we understand what it is obtained from the action of the used methods on the object which the researcher studies to know it.” (Enăchescu, 2007)

The result of the basic research is „a general model about how the surrounding world is made and evolves. This model may be developed in reference publications called primary publications and resumed and explained in a less formal language in other publications that cite the primary ones. The model related to the world aims to make predictions about the evolution of various aspects related to nature and society. Based on these predictions, modern society adapts to reality.” (Ad Astra Association, 2005)

Vlada (2009) counts the following type of scientific papers, written in their final form - full paper: original article, teaching article, specialized study, specialized journal, popularization journal, proceedings, book/monograph, doctoral thesis, dissertation thesis, graduation thesis. (<http://c3.cniv.ro/?q=2010/lucrari>)

The young economists, either graduers in sciences, economical domain, degree graduers, or a superior degree, teachers in the public or private teaching system, researchers in a researching team or in an institute of research, beginners or experienced produce through their activity different results. The final results of the research which contain the accomplishment of the proposed objectives, must be known by the specialists, the difusion in the scientific areas being made by scientific communications, articles or monography, published on the theme of the research.

Beginning with the affirmation that “the main way of publishing of the scientific research is today the journal and the specialty periodical”, accompanied by the explanation that “at least the published article is dominant, favouring the information and research in science, as the reputations and careers of the researchers” (Cenar, 2010), we presented in an organised way, structured on known categories and alphabetically ordered, the Romanian Scientific journals from the

economical area assuring, through the contact electronic information an easier identification of the journals which assures the best communication to the national and international economical scientific area of the own research results.

In reaching the objectives of this study, we want to express our awareness about not being able to guarantee the width in the lists presented of the all journals, which in a larger or smaller way they answer to the searched themes. The limits are not given by the bad will of the authors, but by the factors as the difficulty of the inventory process reported to the searched area, the continuous updating of the lists with evaluated journals by the enabled institution, the dynamics of the collective editorial activities preoccupied with the updating of the web pages of the managed journals, the lack of function of some web addresses; all these determining the possible lacks or limits of identification. At the same time, we mention that we did not include the journals which have no official presenting websites. Even in the limited mentioned limits, we think that through the presentation of this synthesis of the economical scientific journals, updated according to the latest information posted by CNCSIS on the official site, we bring a better visibility, by announcing separately, making easier, through the drawing out of the unclassified lists, according to the themes interested to the economists, the searching of the pattern destination for the final product of the research.

The further research aim to the updating of lists with the scientific journals grouped according to the recognition and the category of framing considering the next stages in the process of evaluation and classification of the CNCS journals. At the same time, for the national scientific research in the economical domain, is relevant the accomplishment of an analysis of the dynamics of the economical scientific reviews on categories afferent to the period between the start of the process of evaluation and the present moment.
